The volumen of health-care data is constantly growing

Health care generates a vast amount of clinical data, which is collected and stored electronically. The average person is likely to generate more than one million gigabytes of health-related data in their lifetime, 30% of which at the genetic level.

Currently, medical data doubles every year. By 2020, it is expected to double every 73 days.

Funded by

We need to share and re-use data, always for the benefit of patients

While improving clinical practice,
we build up a more digital and sustainable health-care system

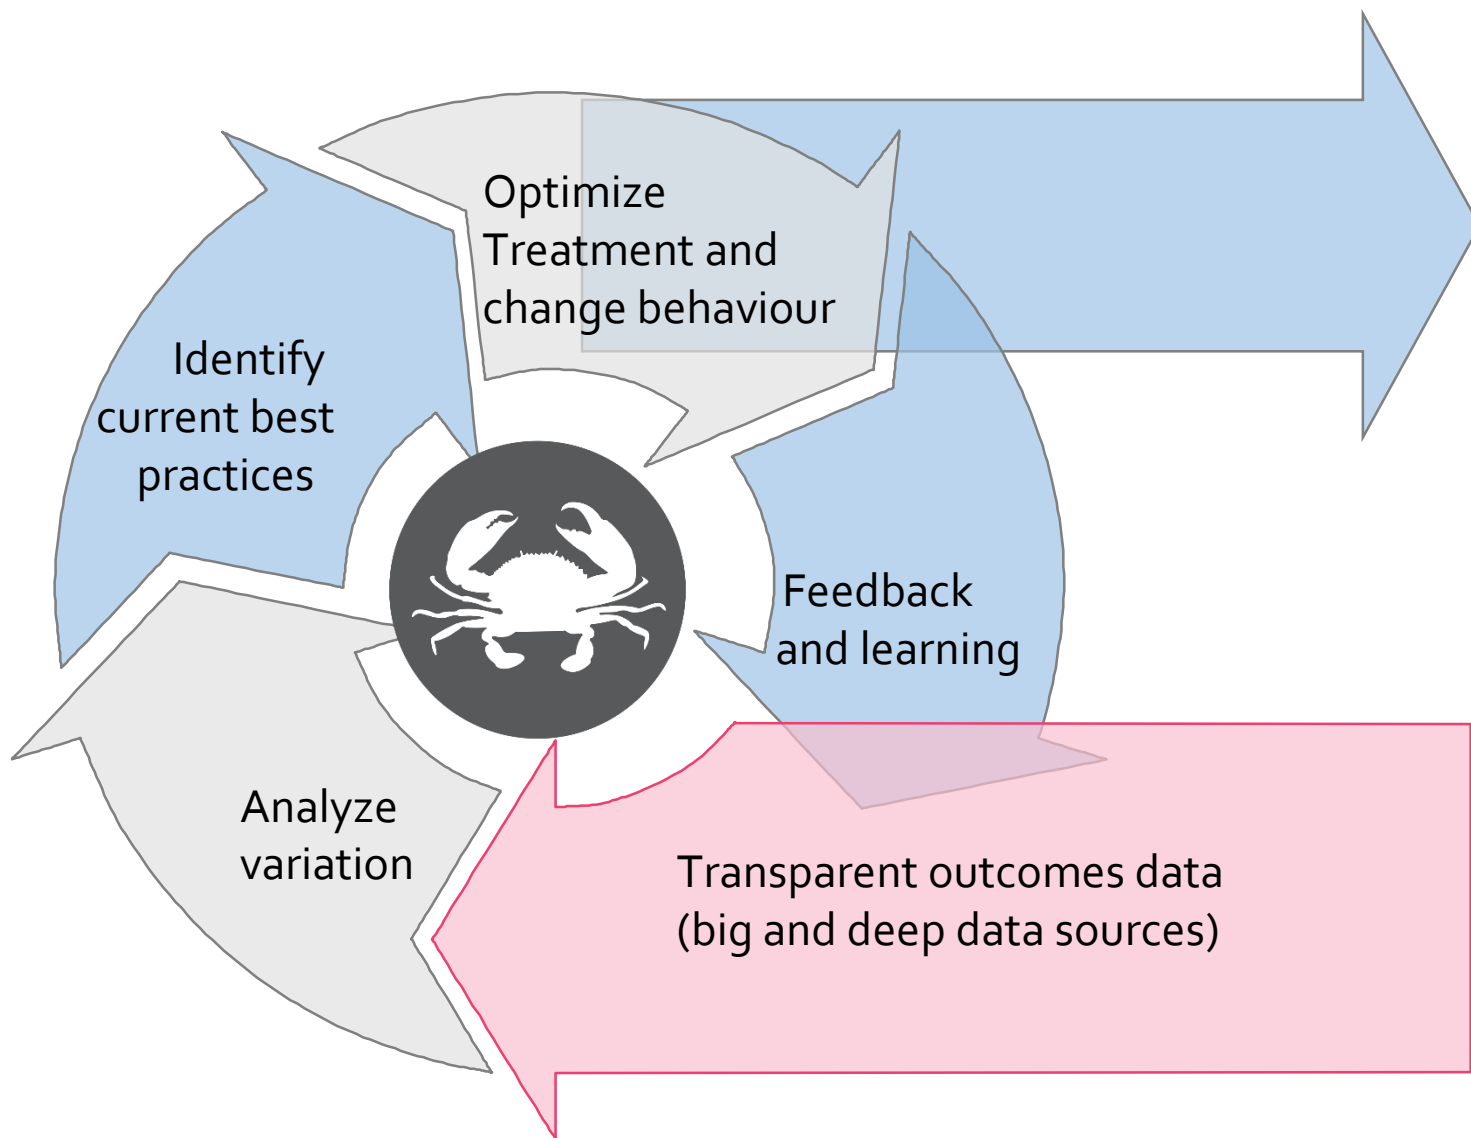

Funded by

innovative
medicines
initiative

Our health-care systems generate billions of data that can be used to help patients

Data re-use

- ✓ Improved outcomes
- ✓ Reduced variation
- ✓ Increased efficiency

Sustainable health care

Funded by

HARMONY is the biggest BD4BO Project within IMI

Building a high-quality Big Data platform on haematological malignancies

Harmonization of outcome measures and endpoint definitions for HMs at European level

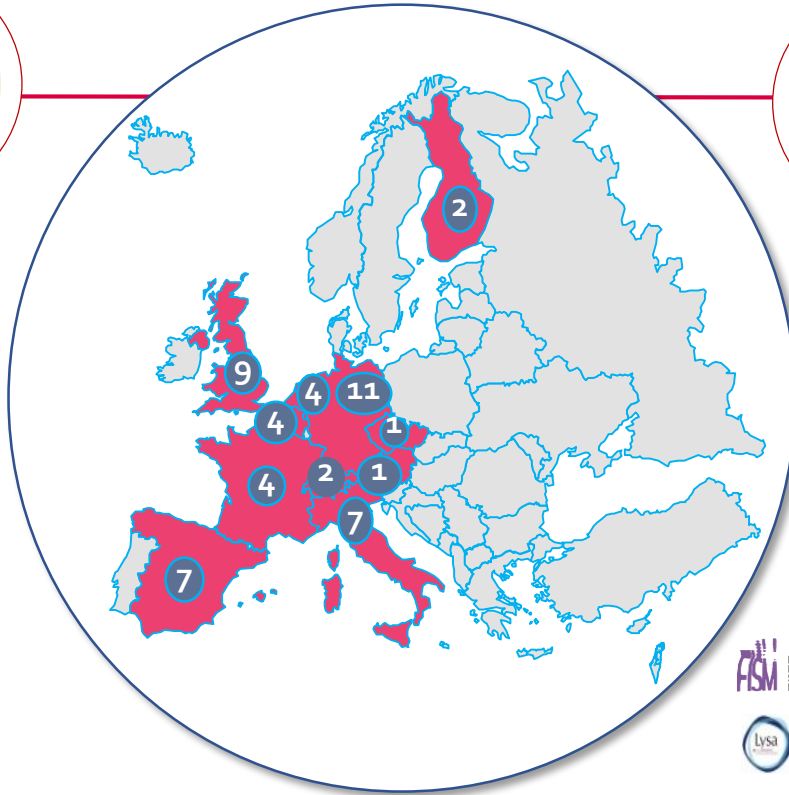

Speed up drug development, access pathways and bench-to-bedside process

Increase the application of omics data in clinical practice

Big Data to meet the biggest needs in Hematologic Malignancies

European Alliance for Personalised Medicine

53 organisations from 11 countries, working accross 7 hematological malignancies

Funded by

AML

Identification of gene-gene interactions and impact on disease outcome

5+ groups
4500+ patients

CLL

Large-scale mutation analysis - Novel prognostic/predictive scheme for improved risk stratification aimed at personalized medicine

ERIC: 24+ groups
5000+ patients

MM

Revised International Staging System for MM in the European clinical trial population and evaluation of the efficacy of different novel agents and treatment approaches

APL

Open issues in the management of acute promyelocytic leukemia

Pediatrics / ALL

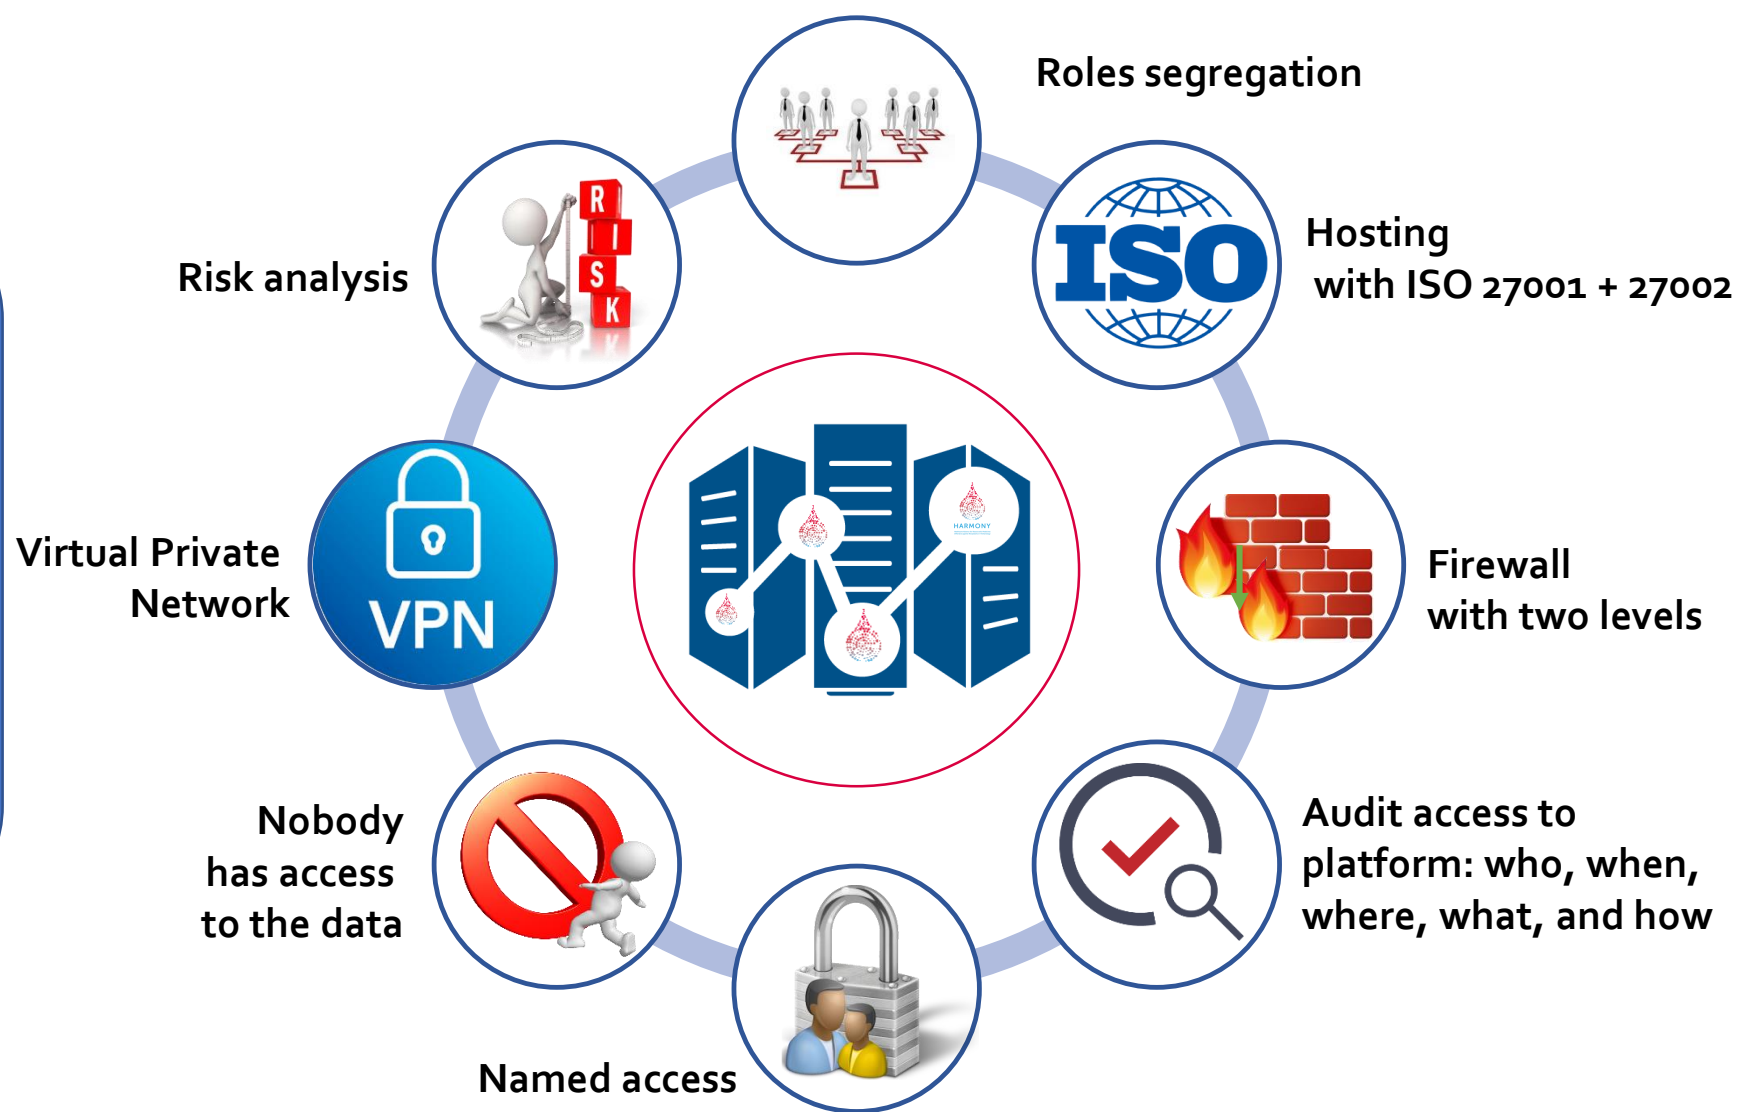

Definition of a common data set in childhood malignancies for cross entity analysis comparison of pediatric and adult data

HARMONY Bench-to-Bedside Projects: working on specific questions by disease

De-facto anonymisation

"Technical and organisational measures to protect data"

- Technical anonymisation
 - Supression
 - Generalisation
 - Perturbation
- Organizational security
 - Policies
 - Processes
 - Contracts
- Data Access Restrictions

Our HARMONY Platform is completely safe and compliant with GDPR

**New technologies
can be safely
incorporated to
health care**

**Digitalisation leads
to a sustainable
health-care system**

**Development of
tools that
improve
clinical practice**

**Benefiting patients
while protecting our
health-care systems**

**Preserving
patients' privacy
while promoting
research**

There are initiatives and solutions that can benefit both patients and health care systems

Promoting and investing in Big Data will prove to be beneficial for the whole society

Thank you!
